

Smart Waste Monitoring System

Analytics & Performance Report

Report Generated: 2026-07-02 13:10:02
Generated By: Smart Waste Monitoring System

System Overview

This report presents analytics generated from the smart waste monitoring system. The system analyses bin fill levels and identifies collection priorities.

Metric	Value
Total Records Analysed	18992
Average Fill Level	49.8%
Critical Records	3911
Highest Risk Bin	BIN-001
Highest Fill Level	100%

Historical Trend Analysis

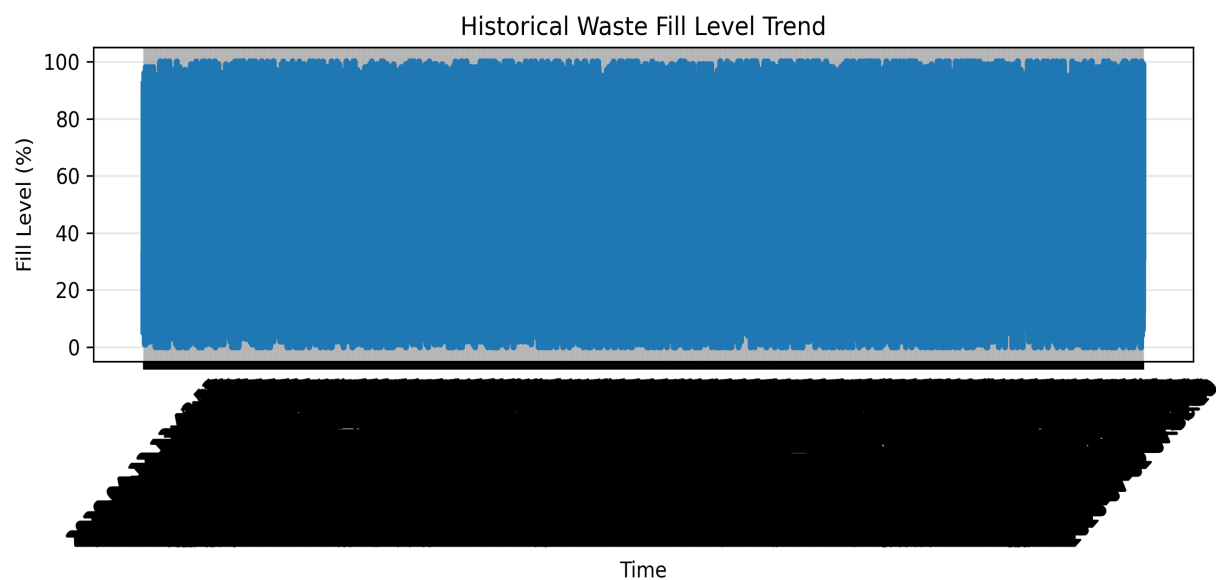

Figure 1. Historical waste fill level trend across recorded sensor readings.

Risk Distribution Analysis

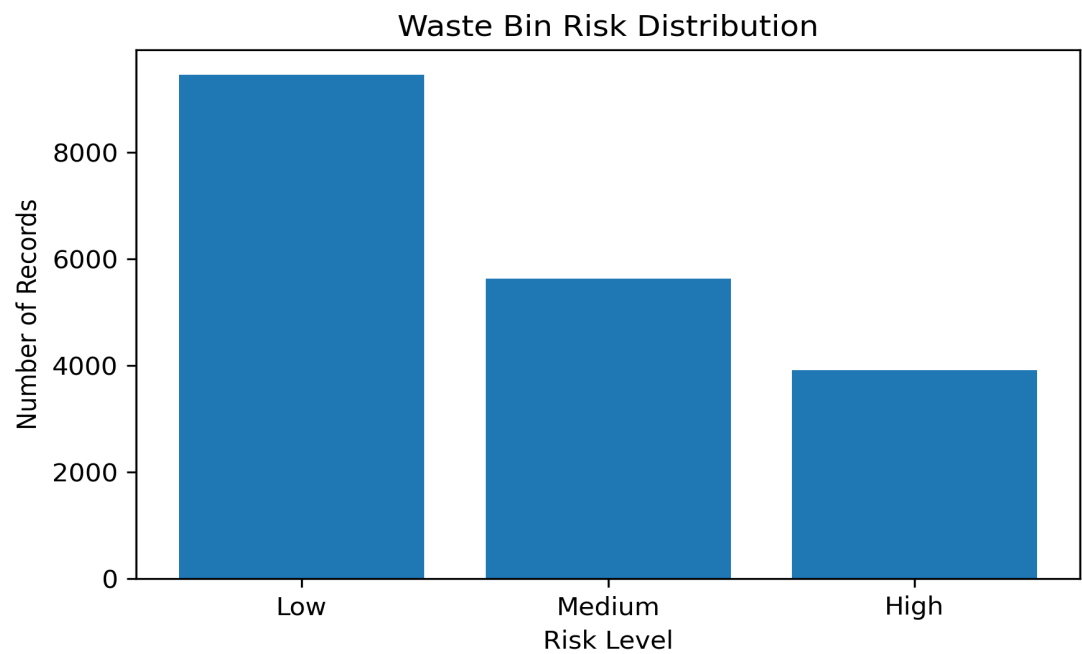

Figure 2. Distribution of low, medium and high risk waste records.

System Assessment

The analytics module successfully evaluates historical waste accumulation trends and identifies high-priority collection requirements. The generated visualisations support operational decision-making by highlighting waste patterns and risk distribution across monitored bins.
