

Smart Waste Monitoring System

Analytics & Performance Report

Report Generated: 2026-08-23 14:13:35
Generated By: Smart Waste Monitoring System

System Overview

This report presents analytics generated from the smart waste monitoring system. The system analyses bin fill levels and identifies collection priorities.

Metric	Value
Total Records Analysed	459
Average Fill Level	46.7%
Critical Records	68
Highest Risk Bin	BIN-003
Highest Fill Level	94%

Historical Trend Analysis

Figure 1. Historical waste fill level trend across recorded sensor readings.

Risk Distribution Analysis

Figure 2. Distribution of low, medium and high risk waste records.

System Assessment

The analytics module successfully evaluates historical waste accumulation trends and identifies high-priority collection requirements. The generated visualisations support operational decision-making by highlighting waste patterns and risk distribution across monitored bins.
